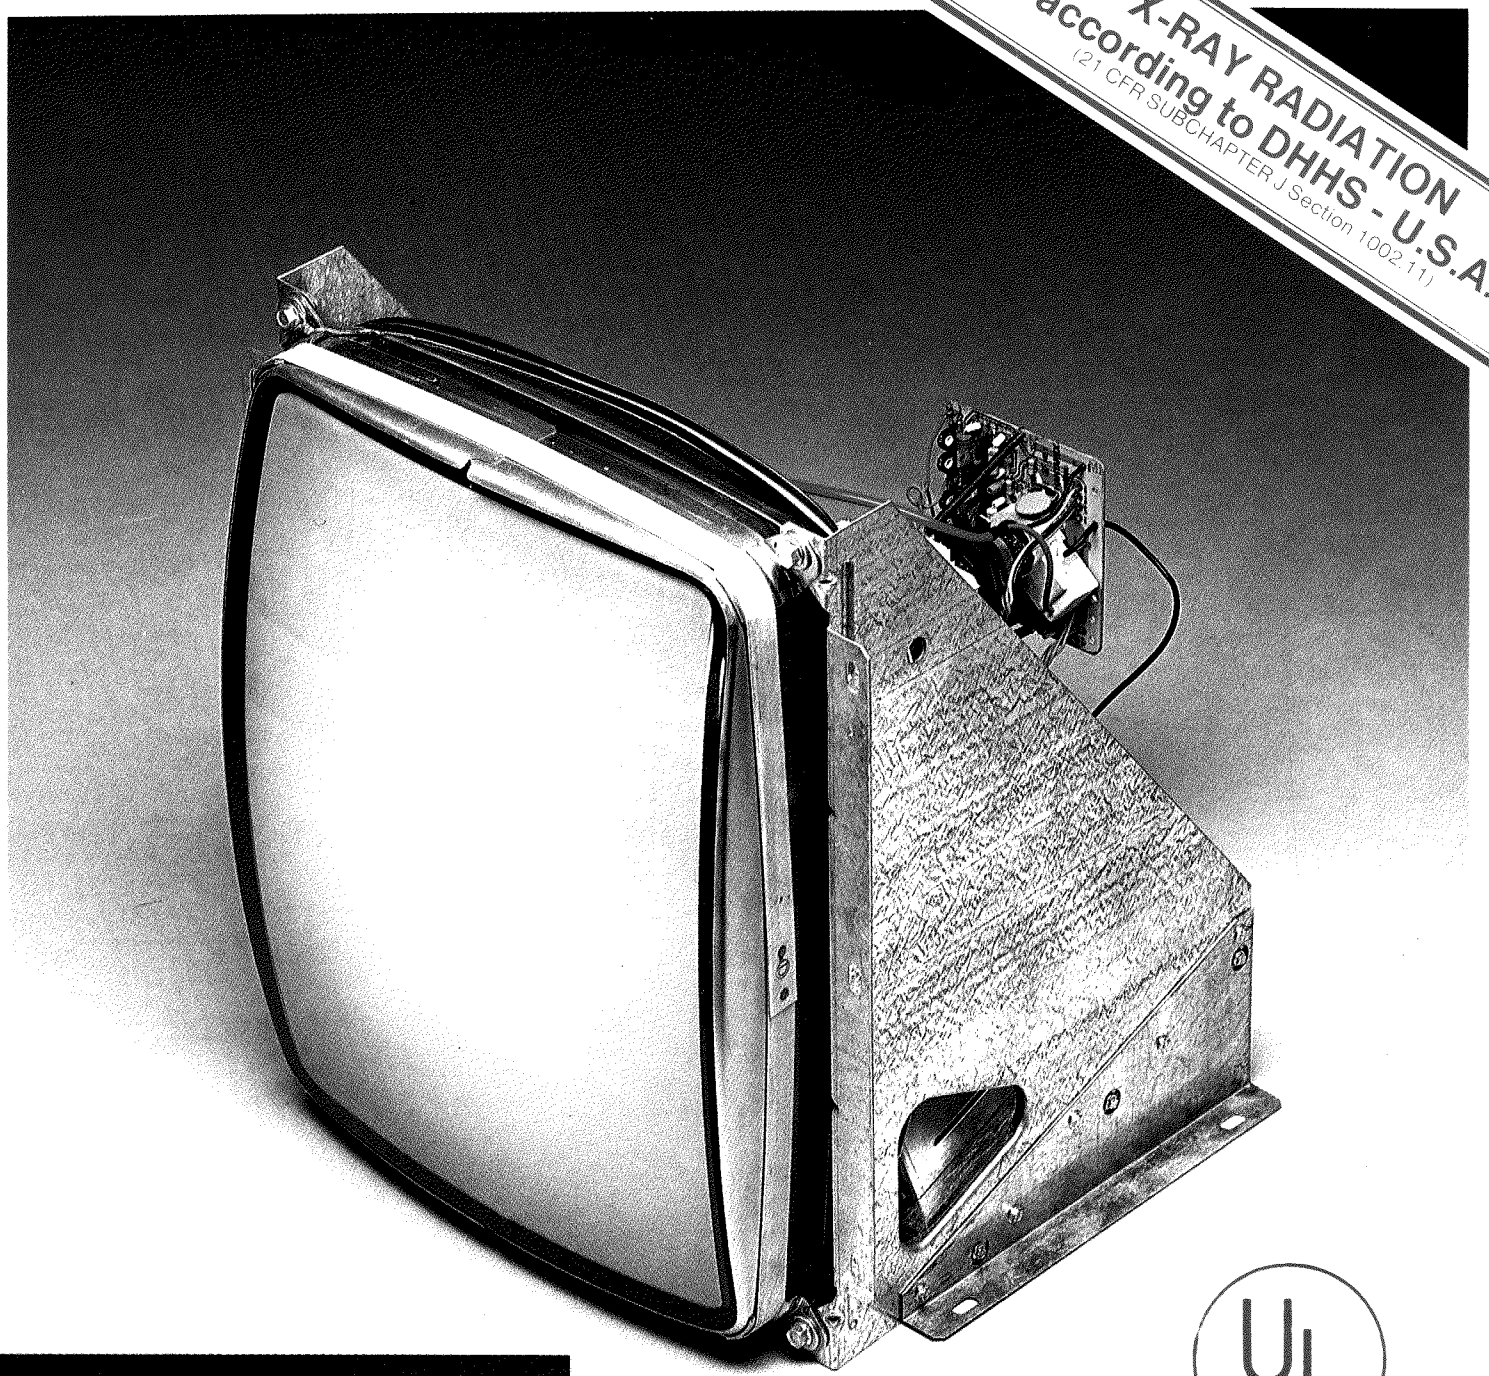
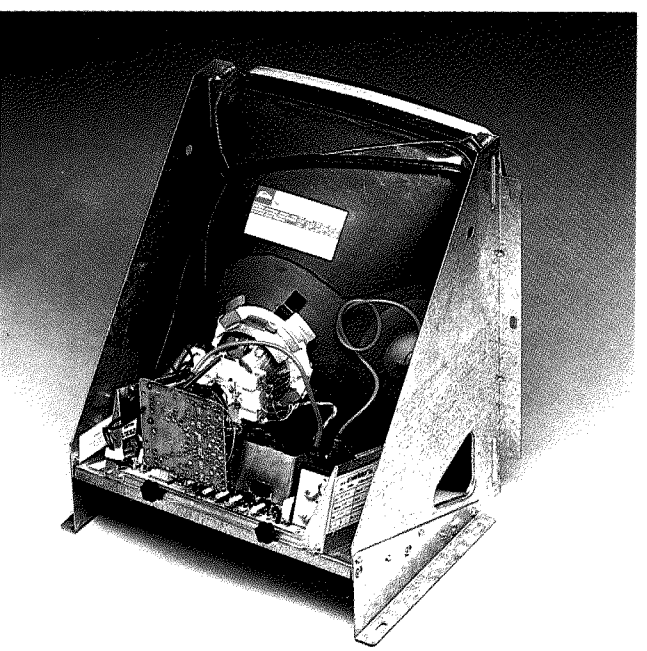
(21 CFR SUBCHAPTER J Section 1002.11)



UL

LISTED



color monitor 19"

MTC 900/E U.S.A.

vertical

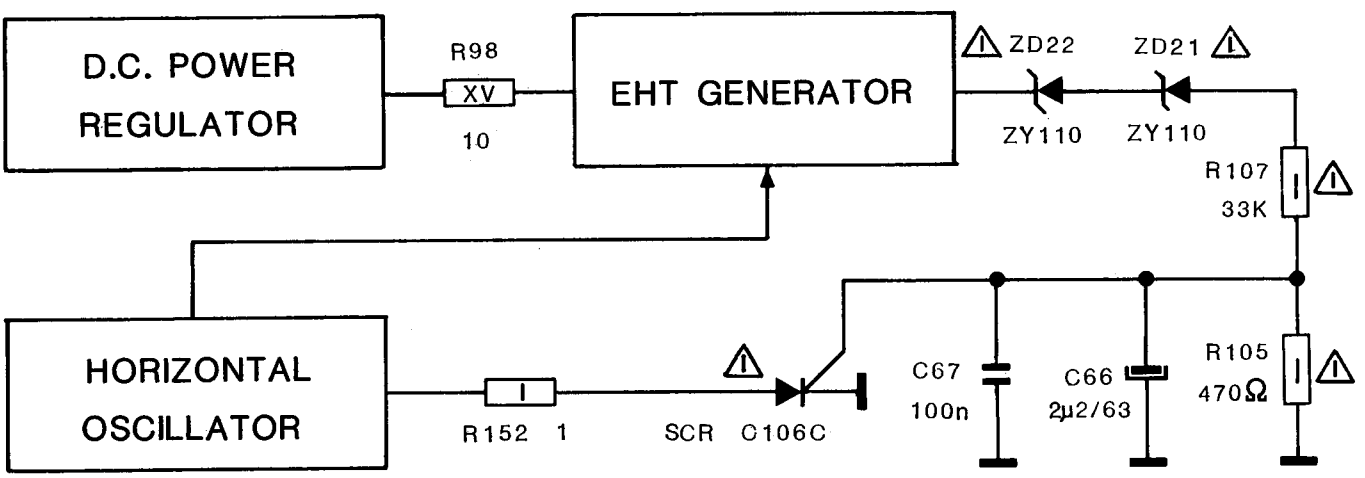
WARNING

The chassis and the heat sinks are connected to ground. Hence, for the measurement of voltages, connect the negative terminal of the measuring instrument to the chassis.

- **X-RAYS**
  the chassis has been designed to give the minimum of x-ray radiation and a special safety circuit guarantees that even in the event of failure radiation will never exceed 0.5 mR/h. For this reason it is essential not to alter the C.R.T. circuit in any way.
- **E.H.T.**
  The monitor embodies sources of high voltage capable of delivering **LETHAL** amounts of energy. Hence to avoid harm to the operator, follow precautions set down for the servicing of E.H.T. equipment.
- **C.R.T.**
  The cathode-ray tube is a high vacuum component and its surfaces are subjected to strong exterior pressure. One therefore must take care not to knock or scratch the tube as this could cause implosion. If follows that the personnel responsable for its installation must use glasses and proctective clothing against flying splinsters.
- **SHOCK**
  To prevent the possibility of electrical discharges do not expose the monitor to rain or humidity.

PROTECTION AGAINST X-RAY RADIATION

(patent n° 91830158.4)



PROTECTION CIRCUIT

MTC 900/E includes an "X ray radiation" protection circuit. A reference voltage taken from the secondary of the E.H.T. transformer is fed via a resistive voltage divider to the gate of an S.C.R.
When the EHT voltage becomes more than 28,5 Kv, the reference voltage at the S.C.R. gate will increase sufficiently to fire the SCR which stops the Horizontal oscillator and therefore the generation of EHT.

The circuit continues blocking the oscillation until the break down has been repaired and the supply reset.

OPERATING INSTRUCTIONS

1) Apply a suitable power source to the monitor through an isolation transformer by means of J1

2) Apply a suitable signal source to the monitor by mean of connector CA

3) SET UP CONTROLS
All controls are preset at the factory, but may be adjusted to suit program material, please refer to page 8 (SETTING UP PROCEDURE)

4) For negative input $\overline{\text{SYNC}}$. Pulses use connector CC
pin n° 2 for $\overline{\text{VERT}}$.
pin n° 3 for $\overline{\text{HOR}}$.

PERFORMANCE AND OPERATING DATA

1) SUPPLY

	min	max
VOLTAGE	98 Vac	130 Vac
FREQUENCY	44 Hz	65 Hz

NOTE: apply supply voltage through an isolation transformer with 1.5A capability

2) HIGH VOLTAGE
for 19" models ..... 22,5 kV – 25,5 kV
NOTE: conditions for above:
I (beam) = O mA
DC supply voltage = 115 VDC

3) INPUT SIGNAL AND PIN ASSIGNEMENTS FOR CONNECTOR CA

PIN N	DESCRIPTION	IMPEDANCE	SIGNAL
1	red input	1k nom.	0 to 4V
2	green input	1k nom.	0 to 4V
3	blue input	1k nom.	0 to 4V
4	ground		
5	vertical sync. pulse	10k nom.	1,5V to 4V
6	horizontal sync. pulse	10k nom.	1,5V to 4V

4) SERVICE SET-UP CONTROLS

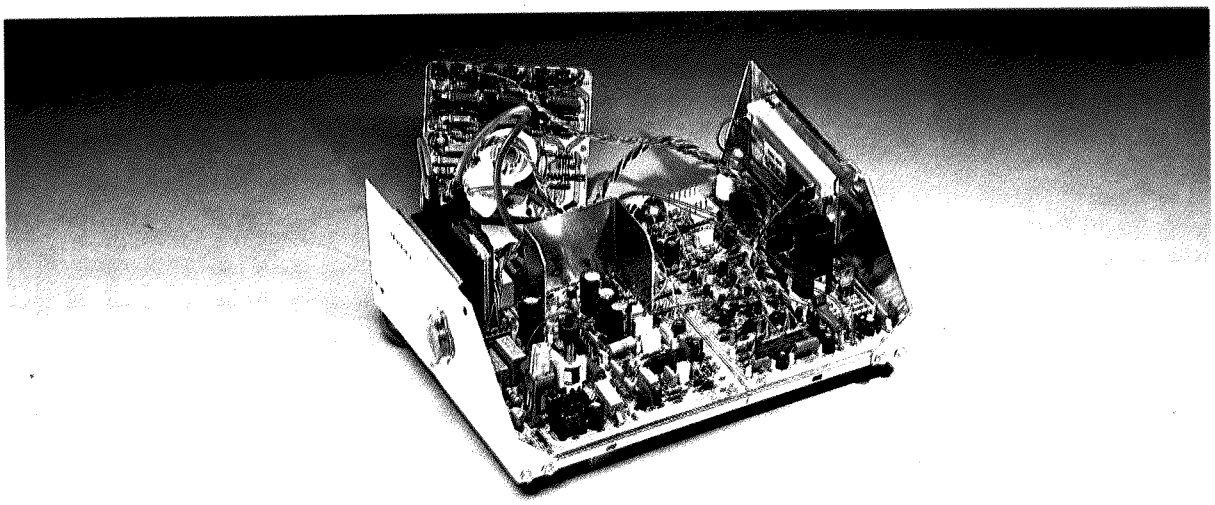
ON THE INTERFACE BOARD

RV 12 supply voltage adjustment – set to 115Vdc
RV 10 brightness control
RV 1,2,3 contrast

ON THE DEFLECTION BOARD
RV 13 horizontal frequency
RV 14 horizontal phase
RV 23 vertical shift
RV 17 vertical linearity
RV 15 vertical hold control
RV 16 vertical amplitude
B 4 linearity coil
B 5 width coil

ON THE EHT TRANSFORMER
— G2 – brightness preset control
— focus control

ON THE SOCKET BOARD
video drive controls – "gain"
RV4; RV6; RV8
CRT cut-off controls – "black level"
RV5; RV7; RV9



DESCRIPTION		MIN	TYP	MAX	UNITS
Supply					
INPUT ac	monitor input-with isolation transformer	98	117	130	Vac
POWER			110		W
DEGAUSSING	automatic		117		Vac
Interface	**RGB Analog Signal TTL compatible**				
VID. SIGN. INPUT	RGBsignal:	1	4	5,5	Vpp
SYNC. INPUT	TTL compatible separate horizontal and vertical or composite				
	(H+V) positive or negative Input	1,5	4	5,5	Vpp
BLANKING	Horizontal retrace/blanking time		11		µS
VIDEO	Frequency response (-3 db)		8		MHz
	Rise time		50		nS
	Over shoot		0,5	3	%
BEAM-LIMITER	Beam current		1		mA
CONTROLS	Brightness and contrast		100		%
Deflection					
GEOMETRY	Horizontal linearity		±14		%
	Vertical linearity		±10		%
	Pincushion		± 3		%
	Horizontal scan size		-4+10		%
	Vertical scan size		± 15		%
EHT					
EHT	(117 Vdc O-beam current)	23	24	25	KV
X-RAY SAFETY	EHT voltage which shut-off the Emission monitor		28,5		KV
X-RAY				≪0,25	mR/h
CRT					
90°			19		INCHES

SETTING-UP PROCEDURE

INSTRUMENTATION REQUIRED
Digital multi-meter with input impedance of 10MΩ. An oscilloscope with a bandwidth of 10MHz and a 10/1 probe attenuator. An RGB color bar generator type HANTAREX K190E.

After the monitor has been turned on for about 5 minutes, adjust the controls until an acceptable image has been obtained and than proceed to the alignment of the chassis according to the following instructions.

1) **POWER SUPPLY WITHOUT SIGNAL**
Variable resistor RV 12 adjusts the supply voltage and requires adjustment only following repair, in which case proceed as follows:
a) turn the G2 control counterclockwise to the minimum.
b) connect digital voltmeter to SP20 and adjust RV12 to obtain a voltage of 115 Vdc

WARNING
Voltages greater than or less than nominal impair the functioning of the monitor.

2) **RGB INPUT LEVELS.** (signal: color bars)
Turn RV10, brightness control, to the maximum; checking on R27, R28, R31 adjust input control RV 1, 2, 3 (contrast) to obtain a 0,6 Vpp.

3) **RGB VIDEO OUTPUT** (signal: color bars)
- Adjust RV5; RV7; RV9 on the socket-board to obtain at KG; KR; KB, a "black level" at 140 Vdc.
- Adjust RV4; RV6; RV8 to have, at the same points, a "gain" of 50 Vpp.
- Adjust RV10 (brightness) to have, at the same points, a "black level" at 160 Vdc.
- Adjust G2 to obtain cut-off on the CRT.

4) **WHITE BALANCE** (signal: no signal)
With RV10 turned to make a white background visible correct the grey by means of RV5; RV7; RV9.

5) **HORIZONTAL OSCILLATOR** (signal: crosshatch)
Short circuit TP7 and TP8 then adjust RV13 to obtain the most stable image in the horizontal sense and then remove the short circuit.

6) **VERTICAL OSCILLATOR** (signal: crosshatch)
Regulate RV 15 so as to obtain a slight roll-over of the image in a downward direction. Than turn back slowly to stop this roll-over.

7) **HORIZONTAL GEOMETRY** (signal: crosshatch)
Set the horizontal linearity coil B4 for maximum amplitude and then adjust for the best horizontal linearity. Adjust RV14 for correct horizontal centering. Finally re-adjust horizontal amplitude by means of B5 width coil.

8) **VERTICAL GEOMETRY** (signal: crosshatch)
Adjust RV16 so as to reduce the image by 3 cm with respect to the height of the CRT. By means of RV23 centre the graticule vertically, and adjust RV16 again for the correct vertical amplitude and RV17 for the best linearity.

9) **FOCUS** (signal: crosshatch)
Adjust focus control to obtain the best visual result.

WARNING
The monitor is pre-set to work with a video active time of about 40µs.
However, to change the video active time to 50µs cut the yellow jumper between points SP24; SP25 (see Diagram on page 10).

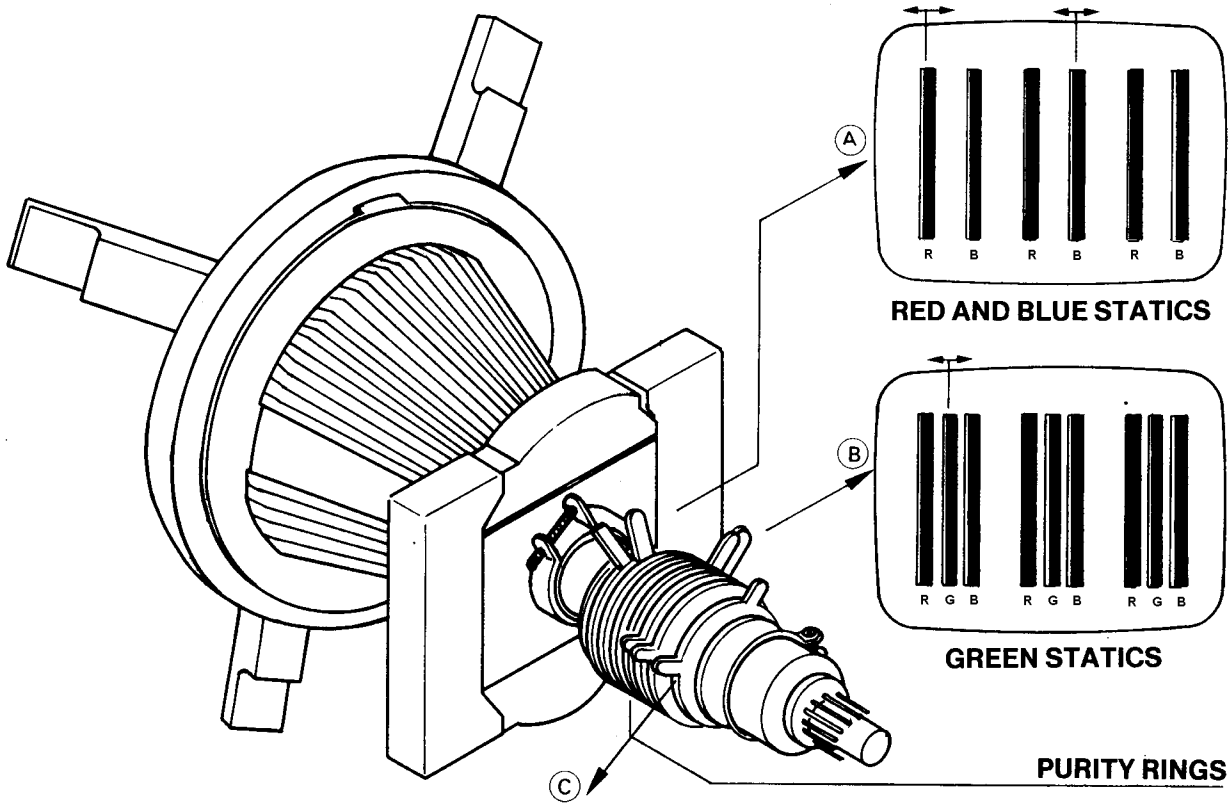
STATIC CONVERGENCE RINGS



The kind of picture tube used, is the toshiba 510 510 UEB 22 (TC02) selfconvergence type. All Adjustments (purity and convergency) are directly made by the tube manufacturer.
In case convergence or purity readjustments are required, you can operate as follows using a crosshatch pattern generator:

Release the rings from the fixing resin taking care not to turn them.
The rings operate with the following sequency: (see the above picture)

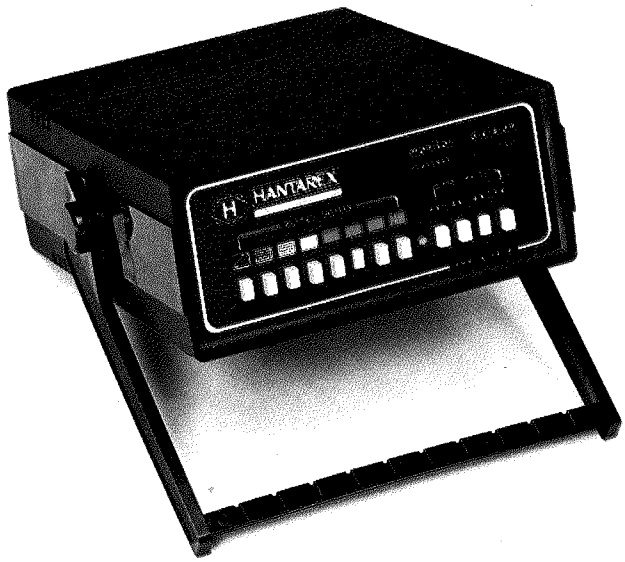
A These rings adjust convergency between red and blue.

B These rings adjust convergency of green respect to red/blue

C These rings adjust points out of purity using a generator with a red field.

Before operating, please take care that the monitor is free from residual magnetic fields. Should any part of the chassis or cabinet become magnetized, it will be necessary to degauss the affected area by means of a manual degaussing coil.

K190E – COLOR GENERATOR



Test Signals and Controls:

1) 7-step grey bars from white to black: video ampl. linearity
2) dot: convergence
3) cross hatch: linearity and geometry
4) white field: picture tube chromatic temperature
5) blue/green/red/field: purity
6) white/yellow/orange/green purple/red/blue/black bars: RGB amplifiers video input levels.

Video Output Levels for all Signals
